

## Only a Week Away From MilfordMD's Seminar for the Public on Today's Hot Skin Tightening Technologies: ThermiTight and ThermiSmooth

### Share Article

MilfordMD Cosmetic Dermatology Surgery & Laser Center, in Milford, Penn., is hosting a seminar, open to the public, on breakthrough radiofrequency-based ThermiTight and ThermiSmooth treatments. The October 4, 2016 seminar starts at 5 p.m. and includes not only education and demonstrations, but also gift bags with cosmetic goodies and exclusive treatment discounts for those who attend.

#### MILFORD, PA (PRWEB) SEPTEMBER 27, 2016

The ThermiTight and ThermiSmooth seminar at MilfordMD Cosmetic Dermatology Surgery & Laser Center, in Milford, Penn., is only one week away. The **Tuesday, October 4, ThermiTight and ThermiSmooth special event**, starting at 5 p.m., is open to the public. Not only will those who attend learn more about the popular skin tightening technologies from MilfordMD Medical Director and cosmetic surgeon Dr. Richard Buckley, but they'll see live demonstrations, get special access to exclusive discounts on ThermiTight and ThermiSmooth treatments and receive a gift bag with cosmetic goodies.

"Skin tightening on the face and body are in high demand," Dr. Richard Buckley says. "ThermiTight and ThermiSmooth use radiofrequency technology to allow us to painlessly tighten skin and wrinkles on the face and body. The result is visibly more sculpted, more youthful looking body and facial areas, without surgery and little to no downtime."

Using the **ThermiTight** device, Dr. Buckley achieves subdermal (under the skin) tissue remodeling by inserting a tiny probe to gently heat the tissue being treated. That might be to tighten skin and address loose, sagging areas around the neck, arms, abdomen, thighs or knees. Dr. Buckley applies the controlled amount of thermal energy to shrink the

ThermiTight & ThermiSmooth are dramatic breakthroughs in micro and non-invasive skin tightening treatments. Our educational seminar will help spread the word about these new and exciting technologies.

tissue. The result is a more contoured neckline, lifted breast or less sagging under the arms, on the thighs or knees.

“We monitor the temperature throughout the in-office procedure with an infrared camera, so it’s effective and safe,” Dr. Buckley says. “Patients see notably tighter, more youthful looking shapes and contours on their body and neck, and the results last months—even years,” Dr. Buckley says.

For **ThermiSmooth**, no aftercare is needed. For ThermiTight, patients wear a light bandage around the treated area for up to three days, but most can resume normal activities the day after treatment, Dr. Buckley says.

One of the reasons for ThermiTight’s popularity is that skin tightening used to exist in the surgical domain. People who wanted a tighter neck and jawline would have to undergo far more invasive procedures, such as a surgical neck lift, which could mean weeks of recovery. MilfordMD patients have given ThermiTight high marks for patient satisfaction. Patients from around the U.S. awarded skin tightening with ThermiTight a strong 85 percent worth it rating on RealSelf.com

Not only does the radiofrequency technology of ThermiTight tighten the tissue, but it also encourages collagen and elastin production in the skin, which makes it look and feel more youthful, according to the cosmetic surgeon.

ThermiTight can be done alone to address areas of skin laxity or in combination with other procedures, such as those to address fat removal or cellulite reduction. “We find ThermiTight works well with **laser-assisted liposuction procedures**, such as Prolipo or Smartlipo. Those procedures use small cannulas to minimally and invasively suction fat cells and permanently rid the body of unwanted fat. Adding ThermiTight can improve results by providing an additional tightening of loose skin, leading to a shapely body sculpting outcome,” he says.

ThermiSmooth also relies on radiofrequency energy to shrink and tighten tissue. But rather than insert the probe under the skin, Doctors Richard and Marina Buckley use ThermiSmooth to heat tissue from outside of the skin.

“ThermiSmooth is totally noninvasive. We target skin that is loose or sagging on the face—for example, bags under the eyes,” Dr. Buckley says. “Usually, we suggest three to six treatments to achieve optimal results. Patients love it because there’s no downtime and ThermiSmooth results in noticeable skin tightening, even after the first treatment, making patients look and feel more youthful.”

As an added benefit, ThermiSmooth treatment, like ThermiTight’s, encourages collagen remodeling, which helps skin in the treated area to look and feel healthier, according to Dr. Buckley.

While the MilfordMD October 4th special presentation on ThermiTight and ThermiSmooth is free and open to the public, seating at this event is very limited and reservations are required. To reserve your spot, call MilfordMD Cosmetic Dermatology Surgery & Laser Center at (570) 296-4000.
