

MELT FAT AWAY

By Holly Vitchers

NEW PROCEDURES NOW AVAILABLE

Advanced
Dermatology
Skin and
Cosmetic Laser Center in
Milford announces that
they now offer two new
procedures recently
approved by the FDA for
use in melting and
removing fat and firming
skin.

Called SmartLipo and ProLipo, these procedures use lasers to liquefy fat cells and are much less invasive than the traditional Liposuction procedure. An added benefit is that the laser also tightens skin so you are not left with the sagging that Liposuction alone can cause. SmartLipo has been widely used for several years in Europe, Canada, the UK, Australia, Japan and other coun-

tries prior to being approved for use in the US. ProLipo is the latest advancement and is more powerful.

Dr. Richard E. Buckley says, "The SmartLipo and ProLipo procedures are fantastic options for people who want to eliminate unwanted fat, get a more toned look, and address specific problem areas. We use local instead of general anesthetic, which is far safer and more comfortable for the patient. The fat is melted by the laser and then removed. Stitches are not needed, and there is a much shorter recovery time than with traditional Liposuction. Since the fatty cells are dissolved and cannot reproduce, the results are

permanent. Also, the laser serves a double purpose in that it tightens the underside of the skin in the treatment area, so you are less likely to get loose sagging skin where the fat has been removed."

"I want to stress that this is not a weight loss program," Dr. Buckley says. "The SmartLipo and ProLipo procedures serve to sculpt and tone. They are ideal for the patient who has a paunch or roll in the tummy area, saddle bags, or inner thigh problems or a double chin that they want to reduce. It also works well on the jaw line, neck, arms, hips, buttocks, knees and calves. SmartLipo and ProLipo can also be used for female and male breast reduction."
