

Cosmetic Surgeon and MilfordMD Medical Director Dr. Richard Buckley Shares What He Learned from the Vegas Cosmetic Surgery Meeting

Share Article

Cosmetic surgeons from around the world gather at the Vegas Cosmetic Surgery & Aesthetic Dermatology meeting to share the latest in cosmetic surgery research, new technology and new approaches to some of today's most in-demand aesthetic procedures. Drs. Buckley share the impact this meeting has had on the future of their MilfordMD Cosmetic Dermatology Surgery & Laser Center.

MILFORD, PA (PRWEB) NOVEMBER 10, 2016

Cosmetic surgeons from around the world gather annually at the [Vegas Cosmetic Surgery & Aesthetic Dermatology](#) meeting to share the latest in cosmetic surgery research, new technology and new approaches to some of today's most in-demand aesthetic procedures, says cosmetic surgeon and MilfordMD Medical Director, Dr. Richard Buckley.

"Dr. Marina Buckley and I attended and came back to MilfordMD armed with knowledge and new plans for the practice," he says. "We're especially excited about two technologies: CoolSculpting and ThermiVa."

Dr. Buckley says there was strong evidence presented at the 12th annual Vegas Cosmetic Surgery & Aesthetic Dermatology meeting on Zeltiq's CoolSculpting technology for nonsurgical fat reduction: "We've had brisk demand for CoolSculpting at MilfordMD Cosmetic Dermatology Surgery & Laser Center, in Milford, Pennsylvania and found our colleagues are also embracing this relatively new option in fat removal."

Cryolipolysis, which is the term trademarked to describe a process of freezing fat cells, is making big news at aesthetic conferences

After attending the 12th annual Vegas Cosmetic Surgery & Aesthetic Dermatology meeting, Dr. Richard and Marina Buckley reveal lessons learned and the exciting new additions in store for MilfordMD.

“We attend meetings, like the Vegas Cosmetic

worldwide. The FDA-cleared **CoolSculpting** technology works on the premise that fat cells are more sensitive to cold than nearby skin and tissues. The controlled cooling technology platform selectively diminishes fat bulges without surgery by, in essence, freezing localized fat cells. The body then naturally eliminates the dead cells, for long-lasting fat removal.

“CoolSculpting is today’s number one non-invasive fat reduction procedure,” Dr. Buckley says. “CoolSculpting is available in 70 countries and has earned a 97 percent favorable online brand sentiment rating. It’s important for us to know that patients worldwide are happy with the procedure.”

Another important take-home message from the cosmetic surgery meeting had to do with the rising demand among women for **vaginal rejuvenation**.

“Based on what we heard in Vegas, we’ve decided to offer one of today’s top radiofrequency technologies for vaginal rejuvenation, the ThermiVa,” Dr. Marina Buckley says.

Plastic surgeon Dr. Jennifer L. Walden, of Austin, Texas, presented at the meeting on “Controversies in female genital rejuvenation.”

“This is a movement, I believe, that is overwhelmingly female-centric and not generated by men. Women want to look great ‘down there’ as they do ‘up here,’ and there’s nothing wrong with that!” she says in an article in *Cosmetic Surgery Times*. “The noninvasive radiofrequency procedure, ThermiVa (Thermi Aesthetics), also helps with functional female issues, like mild urinary leakage with coughing or jumping and vaginal dryness due to menopause.”

As laser hair removal and **Brazilian bikini waxes** are becoming more common, women are looking to labiaplasty to reduce the size of their inner lips, Walden reports.

“We go to these meetings to exchange ideas and experiences with the best cosmetic surgeons in the world today,” Dr. Richard Buckley says. “The Vegas meeting never disappoints.” Stay tuned for more about CoolSculpting and ThermiVa, from MilfordMD.
